

MedJobs Sales Lead Operations

Sales Lead view of the MedJobs 2.0 operating system · 4 September 2026

A role view of the MedJobs 2.0 Master Implementation Matrix. Every instruction here comes from that document, which stays the source of truth. Nothing has been added to the operating model; where the master leaves a question open, it is marked **GAP / DECISION NEEDED** rather than answered here.

ROLE PURPOSE Hold the two meetings the Admin Team books, and turn each into something the Consumer Relations Manager can act on: a converted provider on one side, an agreed channel plan on the other. The Sales Lead owns a narrow, decisive middle of both pipelines.

WHAT YOU OWN PR2 provider meeting held. ST2 advisor meeting held. Logging both outcomes. Naming the handoff in the room. Where a physician in the room changes the answer during ST3 to ST7, you share ownership with the Consumer Relations Manager.

WHAT YOU DO NOT OWN Prospecting, outreach and booking, which are the Admin Team's (PR1, PR-OUT, ST1, ST-OUT). Client success, university activation, matching, fulfilment and billing, which are the Consumer Relations Manager's or the Portal's.

WHO HANDS WORK TO YOU The Admin Team, at the booked meeting, on both sides. The row arrives in the **Meetings** queue with its full timeline.

WHO YOU HAND WORK TO The Consumer Relations Manager, once the outcome is logged.

RECEIVING THE ADMIN TEAM HANDOFF

A booking is the handoff. The Admin Team books the 30-minute *Student Caregiver Program* slot, usually live on a call or off a reply that names a time, and the row lands in **Meetings** at `olera.care/admin/medjobs/in-basket?tab=meetings`. Once the time has passed it sits under **NEEDS LOGGING**, with the instruction on the tab itself: *"log the outcome to move the row forward."*

Below **NEEDS LOGGING**, **FINDING A TIME** holds rows still coordinating by email. That is a holding state the Admin Team sets by hand, not a meeting, and not yours.

Exhibit M. Meetings tab. What the handoff looks like on your side. **NEEDS LOGGING** carries meetings whose time has passed, over **FINDING A TIME**, which is the Admin Team still coordinating and not yours.

Read the row before the call. The timeline shows every email, reply and call that produced this meeting, including what they said when they replied. On the provider side the drawer's **NEXT STEP** reads *"On the calendar"* and the state chip reads *"Replied, they replied, meeting booked."*

[Back to top](#)

PR2 PROVIDER MEETING HELD

Objective Hold the meeting, convert the provider, and capture what was promised.

Trigger	The booking lands the row in Meetings , under NEEDS LOGGING once the time has passed
Tools	Meetings tab · the provider drawer and its timeline · Log meeting outcome modal · Calendly for a rebook
Communications	Booking confirmation and reminder from Calendly · the post-meeting details email with the agreement · a polite closing note when the answer is no
Completion criteria	Outcome logged and the relationship handed to the Consumer Relations Manager
Handoff	Sales Lead to Consumer Relations Manager. <i>Interested / went well</i> launches activation and moves the relationship on; the other two close the row

REQUIRED ACTIONS

- 1. Read the row before the call.** The timeline shows every email, reply and call that produced this meeting, including what they said when they replied.
- 2. Run the standard structure** and close with the soft agreement ask: *no rush to sign, we just need it before you interview your first student.*
- 3. Log the outcome the same day.** A meeting held and unlogged is a row that stops moving.
- 4. Write down what was promised** in the notes. A note on its own logs the meeting.
- 5. Rebook a no-show once, warmly.** The option opens Calendly for you; people miss meetings.
- 6. A no-show that cannot be rebooked goes back into outreach.** It is not a decline. The row should re-enter a call-and-email sequence rather than sit in Meetings or close.

Outcome	What happens
Interested / went well	Logs the meeting and launches the activation sequence

Outcome	What happens
No-show / reschedule	Logs a no-show and opens Calendly to rebook
Not interested	Sends a polite closing note and stops outreach

Exhibit N. Log meeting outcome. A **BOOKED** panel confirming the calendar entry and the attendee, the three outcomes with their consequences, and a notes field. Behind it the drawer shows **NEXT STEP** over a timeline running back through every reply and send.

WHAT MUST BE RECORDED

Booked time, attendee name and address, outcome / notes and commitments.

[Back to top](#)

ST2 ADVISOR MEETING HELD

Objective Hold the meeting, agree which of the five activation channels are open to us, and hand the Consumer Relations Manager a plan they can act on without asking again.

This meeting is not a sale. It is a channel-planning session. The provider meeting ends in a commercial agreement; this one ends in a route to students. The advisor already believes pre-health students want caregiving hours. What we do not know is how their campus reaches them, and the output is the ST3 to ST7 plan.

Trigger	The booking lands the row in Meetings , under NEEDS LOGGING once the time has passed
Tools	Meetings tab · the partner row and its timeline · Log meeting outcome , the same modal and the same three outcomes as the provider side · video for the meeting
Communications	Booking confirmation and reminder from Calendly · the post-meeting note with the ready-to-send copy and flyer the advisor asked for · the results-back note that carries the next ask
Completion criteria	Outcome logged, the agreed channels and their named contacts written down, and the relationship handed to the Consumer Relations Manager
Handoff	Sales Lead to Consumer Relations Manager. <i>Interested / went well</i> launches activation and hands over the channel plan; the other two close the row

REQUIRED ACTIONS

- 1. Read the row before the call.** Advisors notice when you already know what they told the last person.
- 2. Open by naming what students get**, not what we want: hours, a letter, and experience that strengthens a med, PA or nursing application. That is the advisor's job, which makes it common ground.
- 3. Then work the five channels in order.** This is the body of the meeting.

4. **Ask for their read, not just their permission.** *"Which of these actually reaches pre-health students here?"*
An advisor telling you the job board is dead and the listserv is everything saves the Consumer Relations Manager a month.
5. **Get a name for every open channel.** A channel with no named contact is not a channel.
6. **Ask what they need from us to make it easy**, being copy, a flyer, a date, then send it within two days.
7. **Log the outcome the same day**, with the channel plan in the notes.

Exhibit L. The booking page. What both a provider and an advising office see: **Student Caregiver Program**, 30 minutes, your name, and the pitch, over a date and time picker. One event serves both funnels, which is what **B8** is about.

THE FIVE CHANNELS

Channel	Ask	The answer the Consumer Relations Manager needs
ST3 University job board	Is there a board pre-health students actually check? Who posts, and does it need approval?	The board, the posting route, and who approves
ST4 Student organisations	Which orgs reach these students, pre-med, pre-nursing, AMSA chapters? Who runs them this term?	Org names and current officers, with a warm introduction where they will make one
ST5 Campus events	Which fairs or events are worth attending, and what are the deadlines and costs?	Event, date, registration deadline, who books the table
ST6 Advisor listservs	Do you email these students directly? Would you send something for us?	Which list, who sends it, how often they are willing, and the copy they want
ST7 Professors and class visits	Which professors teach the courses these students take? Would an introduction be welcome?	Named professors, and explicitly whether we may approach them

Permission is the deliverable on ST6 and ST7. A listserv send and a class visit both happen on someone else's authority. Write down who granted it and what exactly they agreed to, because the Consumer Relations Manager will be acting on it weeks later without having been in the room.

Outcome	What happens
Interested / went well	Logs the meeting and launches the activation sequence
No-show / reschedule	Logs a no-show and opens Calendly to rebook
Not interested	Sends a polite closing note and stops outreach

WHEN THE ADVISOR SKIPS THE MEETING

Some advisors will not take a call. They reply to the outreach by simply telling us what to do: post it here, email this officer, send me copy for the listserv. **Take the advice and act on it.** A channel the advisor handed us is worth more than the meeting that would have produced it. Two things still hold.

1. **Capture it exactly as if it came from a meeting**, being channel, named contact and permission, so the Consumer Relations Manager inherits the same plan either way.
2. **Keep pushing for the meeting, gently.** Not to unlock the channels; those are already running. A named advisor is what makes the second term easier than the first, and the moment to ask is when you report results back: *here is what your listserv produced. Can we talk about the spring?*

WHAT MUST BE RECORDED

Booked time, attendee, outcome, the channel plan and permissions as notes, and any named contacts offered.

WHERE THE SALES LEAD STAYS INVOLVED AFTER THE HANDOFF

Three places, and only three. The master gives the Sales Lead no other role after the meeting is logged.

Where	What the master says
ST3 to ST7 ownership	The stage is owned by the <i>"Consumer Relations Manager, with the Sales Lead where a physician in the room changes the answer"</i>
ST5 campus events	Who acts: <i>"USM and Sales Lead attend"</i>
ST7 professors and class visits	Who acts: <i>"USM and Sales Lead, once permitted"</i>

Read the second and third together with the first: the Consumer Relations Manager works the plan, and you are in the room where a physician's presence is what makes the ask land.

[Back to top](#)

THE HANDOFF TO THE CONSUMER RELATIONS MANAGER

The boundary is the logged outcome. Before it, the row is yours. After it, the relationship is the Consumer Relations Manager's, on both sides.

Name the handoff in the room. On the provider side the master makes this an explicit step: *"our consumer relations team will follow up with you on next steps."* The provider leaves expecting the next contact, and expecting it from someone else. A warm introduction to a named function beats a cold email from a stranger a week later.

	Provider side	University side
What passes over	The converted provider, the meeting notes, and anything promised	The channel plan: which channels were agreed, the named contact for each, and the permission granted
How it passes	The provider drawer timeline, which the Consumer Relations Manager reads before making contact	As prose in the meeting notes
What the outcome does	<i>Interested / went well</i> launches activation and moves the relationship on	<i>Interested / went well</i> launches activation and hands over the channel plan
What happens next	The Consumer Relations Manager sends the terms email within one business day of the meeting	The Consumer Relations Manager activates every agreed channel within two weeks of the meeting

Two things about this handoff are worth stating plainly, because both are in the master and both bear on whether a relationship becomes ownerless.

Nothing tells the Consumer Relations Manager a provider is waiting. Logging the meeting outcome should alert them; it does not. See **B4** under gaps.

The channel plan is the handoff, and it travels as prose. The master says this is *"enough to work from and not enough to report on."* See **B6** under gaps.

EXCEPTIONS AND ESCALATION

Only the exceptions the master document defines are listed here.

Situation	What the master says to do
A no-show	Rebook once, warmly. The outcome option opens Calendly for you
A no-show that cannot be rebooked	It is not a decline. The row should re-enter a call-and-email sequence rather than sit in Meetings or close. Nothing catches the row today if the rebook never happens, so this is a hand-worked exception
An advisor who will not take a meeting	Take the advice they give in the reply and act on it. Capture channel, named contact and permission exactly as if it came from a meeting, and keep pushing gently for the meeting when you report results back
A meeting held and not yet logged	Log it the same day. A meeting held and unlogged is a row that stops moving

[Back to top](#)

GAPS AND DECISIONS NEEDED

Each of these is a place the master document leaves open or names as unbuilt. None is resolved here.

GAP / DECISION NEEDED · "The standard structure" of the provider meeting is not written down. PR2 instructs the Sales Lead to "*run the standard structure*" and gives only its closing move, the soft agreement ask. The master specifies the ST2 meeting in full, channel by channel, but nowhere sets out the provider meeting's agenda. Either it exists outside this document and should be brought in, or it needs writing. Not resolved here.

B2 · A no-show re-enters outreach automatically. A missed meeting is not a decline. The outcome opens Calendly to rebook, and nothing catches the row if the rebook never happens.

B4 · An alert when a meeting converts, putting the client in front of the Consumer Relations Manager with the meeting notes attached. Not built. Nothing tells them a provider is waiting, which is why naming the handoff in the room matters as much as it does.

B6 · Structured channel capture at the meeting: which channels were agreed, the named contact for each, and the permission granted, as fields rather than prose. The plan lives in the meeting notes. Workable for one operator, unreportable across campuses.

B7 · A state for *channels agreed, no meeting yet*, carrying an open ask for a relationship meeting. No such state exists. The row either sits in Meetings without a meeting or looks like one that never engaged. This is the state an advisor who skipped the meeting leaves behind.

B8 · A partner-facing booking event. Advisors book the provider's event. The invite copy carries over and reads acceptably to an advising office; the slug `home-care-agency-manager-interview` in the URL does not.

B1 · The Meetings tab holds only booked meetings. *Finding a time* is a hand-set state inside Meetings, which muddies the queue you work from.

B12 · Channel attribution. Which of the five channels produced a student. Channels are not modelled as distinct entities, so the plan you agree in ST2 cannot yet be judged by results.

[Back to top](#)

TRACEABILITY

Every section of this manual against its source in the master document. Ownership, sequence, handoffs and completion criteria are carried over unchanged.

This manual	Master document
Receiving the Admin Team handoff	PR2 journey steps 1 to 3 and the two notes beneath; ST2 journey steps 1 and 2; PR2 exhibits M and N
PR2, all of it	PR2 objective, procedure steps 1 to 6, outcomes table, system and handoff row, communications
ST2, all of it	ST2 objective, the not-a-sale note, procedure steps 1 to 7, the five-channel table, the permission note, outcomes table, the advisor-skips-the-meeting block, system and handoff row
After the handoff	ST3 to ST7 owner line; ST3 to ST7 channel table, ST5 and ST7 rows
The handoff to the Consumer Relations Manager	PR3 journey steps 1 and 3 and procedure steps 1 to 3; ST2 system and handoff row and the paragraph beneath it; ST3 to ST7 procedure step 2
Exceptions	PR2 procedure steps 3, 5 and 6; ST2 advisor-skips block; deferred build list B2
Gaps	PR2 procedure step 2; deferred build list B1, B2, B4, B6, B7, B8, B12

Nothing was added. No stage, outcome, channel, permission rule or tool appears here that is not in the master. **Nothing owned by the Sales Lead was omitted:** PR2 and ST2 are carried in full, along with the three places the master keeps the Sales Lead involved after the handoff.
