

Breadcrumb Structure

The Master Pattern

[olera.com/benefits-hub/\[state\]/\[category\]/\[program\]/\[subpage\]](https://olera.com/benefits-hub/[state]/[category]/[program]/[subpage])

Chart template for claude code to repeat is [here](#).

Benefits Hub The homepage of the Benefits Hub. Contains the interactive US map where users select their state.

State The page for the state the user clicks on. For example, clicking Texas on the map takes the user to [/texas](#). This page shows all available programs for that state, organised by category.

Category Programs are grouped into categories to avoid overwhelming the user with a long list. Each category has its own page. The categories for Texas are:

- Financial Help
- Food & Nutrition
- Health Coverage
- Caregiver Support
- Free Resources

Program Each individual benefit program has its own page. For example, Texas SNAP Food Benefits is one program that lives inside the Food & Nutrition category. This is where the user reads the overview of the program and decides if it applies to them.

Subpage Every program page has three subpages that break the information into focused sections:

- **Eligibility:** who qualifies for the program
- **How to Apply:** step-by-step instructions to apply
- **Resources:** additional links, documents, and contacts

LEVELS

Level 0-2

LEVEL 0 Page: Homepage

URL: olera.com

Breadcrumb: —

LEVEL 1 Page: Benefits Hub
URL: olera.com/benefits-hub
Breadcrumb: Home > Benefits Hub

LEVEL 2 Page: Texas State Overview
URL: olera.com/benefits-hub/texas
Breadcrumb: Home > Benefits Hub > Texas

LEVEL 3: Categories

Page: Financial Help
URL: olera.com/benefits-hub/texas/financial-help
Breadcrumb: Home > Benefits Hub > Texas > Financial Help

Page: Food & Nutrition
URL: olera.com/benefits-hub/texas/food-and-nutrition
Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition

Page: Health Coverage
URL: olera.com/benefits-hub/texas/health-coverage
Breadcrumb: Home > Benefits Hub > Texas > Health Coverage

Page: Caregiver Support
URL: olera.com/benefits-hub/texas/caregiver-support
Breadcrumb: Home > Benefits Hub > Texas > Caregiver Support

Page: Free Resources
URL: olera.com/benefits-hub/texas/free-resources
Breadcrumb: Home > Benefits Hub > Texas > Free Resources

LEVEL 4: Programs

(Eligibility is the default tab — no About page)

Page: Medicare Savings Programs
URL: olera.com/benefits-hub/texas/financial-help/medicare-savings-programs
Breadcrumb: Home > Benefits Hub > Texas > Financial Help > Medicare Savings Programs

Page: Texas SNAP Food Benefits
URL: olera.com/benefits-hub/texas/food-and-nutrition/texas-snap-food-benefits
Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition > Texas SNAP Food Benefits

Page: Medicaid Texas
URL: olera.com/benefits-hub/texas/health-coverage/medicaid-texas
Breadcrumb: Home > Benefits Hub > Texas > Health Coverage > Medicaid Texas

LEVEL 5: Program Subpages

(four subpages exist for every Level 4 program. SNAP shown as the example — repeat this pattern for every program above.)

URL: olera.com/benefits-hub/texas/food-and-nutrition/texas-snap-food-benefits

Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition > Texas SNAP Food Benefits > Overview

URL: olera.com/benefits-hub/texas/food-and-nutrition/texas-snap-food-benefits/eligibility

Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition > Texas SNAP Food Benefits > Eligibility

Page: SNAP — How to Apply

URL: olera.com/benefits-hub/texas/food-and-nutrition/texas-snap-food-benefits/how-to-apply

Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition > Texas SNAP Food Benefits > How to Apply

Page: SNAP — Resources

URL: olera.com/benefits-hub/texas/food-and-nutrition/texas-snap-food-benefits/resources

Breadcrumb: Home > Benefits Hub > Texas > Food & Nutrition > Texas SNAP Food Benefits > Resources

Benefits hub Rename

Originally, we were focused mainly on financial support, but we've shifted to a broader subcategory approach. Now, not everything falls under financial—some will be things like food, caregiving, and other types of support.

Previous naming directions:

- Financial Resources
- Care Cost Resources
- Find Help Paying for Care
- Financial Help
- Pay for Care
- Get Financial Help
- Care Affordability

New suggestions

- **Senior Benefit Programs**
Senior benefit programs" receives 720 monthly searches nationally with medium competition, making it realistically achievable to rank for.
- **Senior care programs**
"Senior care programs" is still showing weak traction, with low search volume and barely

any backlink authority, so it's not a strong naming direction. With only about 170 monthly searches and an SEO difficulty of 25, the demand just isn't there.

- **Senior Benefits**

High search volume of 2.4K with high difficulty and low backlinks usually tells me this space is dominated by a handful of really strong sites. Although there's a lot of search, it's likely that most of it is being captured by government sites and major nonprofits, so it's tough to break in.

- Senior Benefits by State
- Senior Care Resources
- Benefits by State

Action orientated names

- Benefits Near You
- Explore Your Benefits

Term	Monthly Search	Backlinks	SEO difficulty
Senior Benefits Programs	720	125.9K	Medium
Senior care programs	170	33.2K	Easy
Senior Benefits	2.4K	8.9K	Difficult

"Benefits" is the universally recognized term used across government and state-specific sites, making it the most familiar and trustworthy word for this audience. "Programs" is used within those same sites to describe the individual offerings within a benefits section, which aligns with how Olera organizes its content. "Resources" carries a different connotation, appearing more on help and reference pages like A Place for Mom, making it better suited as a subpage tab than a hub name.

Competitors

Government benefits

The main benefits portal organizes content into sections and subcategories, allowing users to select which type of benefit they are looking for, such as financial assistance, food support, health coverage, and more.

Then, based on the selected category, the page updates to show only the relevant programs, and the URL and breadcrumb both update to reflect it.

After selecting a program, the page displays full details with multiple content sections. Their breadcrumb reads: Home > Government benefits > Food assistance > Food stamps (SNAP benefits)

Their URL: [usa.gov/food-stamps](https://www.usa.gov/food-stamps)

There is a gap between the URL structure and the breadcrumbs as they do not match.

However, both Olera and USAGov follow the same core structure of Benefits > Category > Program.

Texas Benefits

The Texas Health and Human Services website (hhs.texas.gov) follows a really similar structure—basically services → category → program. For example, their SNAP page sits at: hhs.texas.gov/services/food/snap-food-benefits with a breadcrumb like: Home > Search Services > Food > SNAP Food Benefits.

That’s almost exactly how Olera’s Benefits Hub is set up (benefits-hub → state → category → program). It shows that leading with category isn’t just an SEO choice—it’s actually how people naturally look for benefits.

The main difference is that Texas HHS is built for the general public, while Olera is focused specifically on seniors. So instead of just listing programs, we go deeper—breaking things out into eligibility, how to apply, and relevant resources in a way the state site doesn’t.

SEO Research Keywords

Food assistance:

Google autocomplete data for Texas food-related searches shows the most common queries are:

- Food stamps for elderly in Texas
- Emergency food stamps Texas application

- Texas food stamps application
- Who qualifies for food assistance in Texas
- Texas food help near me

Two things are clear from this data. People search by need and state together, not broadly. This validates Olera's state-level URL structure, as a page at olera.com/benefits-hub/texas/food-and-nutrition is built exactly the way people search.

The searches also skew toward action: apply, qualify, how to claim. These are high-intent users ready to find out if they qualify, which is exactly what Olera's Eligibility and How to Apply subpages serve.

This pattern repeats across all 50 states. No one searches "food assistance nationally" — they search "California food assistance" or "Florida food stamps elderly." Every state page Olera builds targets a real, active search audience. Across 50 states and 5 categories, the Benefits Hub is positioned to capture hundreds of specific, high-intent searches that no competitor currently owns with a clean URL structure.

Financial Help

Google data shows people search for Texas financial senior help in two ways: those trying to understand what exists ("what assistance is available for seniors in Texas") and those ready to act ("Texas financial senior help eligibility" and "Texas financial senior help application").

Olera's category page serves the first group. The Eligibility and How to Apply subpages serve the second. The URL structure maps directly to how people actually search.

Caregiver support

Reveals two distinct types of users looking for benefits information. The first are researchers, people trying to understand what exists and whether it applies to them. The second are actors, people who have already decided they need help and are ready to apply.

Olera's URL structure serves both. The category and program pages answer the researcher. The Eligibility and How to Apply subpages answer the actor. Because each stage has its own dedicated URL, Google can match the right Olera page to the right user at the right moment in their journey.

Key SEO Takeaway

Across all three categories, two consistent patterns emerge. First, people always search by state and need together, never broadly. This means every URL Olera builds at the state and category level is structured exactly the way a real user would type their search into Google.

Second, users are always at one of two stages: researching or ready to act. A well-structured URL and breadcrumb system serves both stages by giving each one its own dedicated page. Google rewards this because it can match the exact page to the exact stage of the user's journey.

This is why breadcrumbs are not just a navigation tool. They are a signal to Google that Olera's content is organised by the same logic people use when they search.

Scalability

The goal of Olera's Benefits Hub is to build the most comprehensive state-by-state senior benefits directory on the internet. Every state, category, and program gets its own dedicated URL, creating a library of highly specific pages that Google can index and rank individually.

50 states, each with 1 state overview page = 50 pages

50 states, each with 5 category pages = 250 pages

Using a conservative average of 11 programs per state, across 50 states = 550 program pages

Each program has 4 subpages (Overview, Eligibility, How to Apply, Resources) = $550 \times 4 = 2,200$ subpages

Total: 3,050 fully indexed, unique pages

The immediate goal is to get all 50 states live and indexed at this structure. Once that foundation is in place, the same URL architecture scales naturally down to counties and cities, adding another layer of highly specific, searchable pages on top of what already exists. Each layer multiplies Olera's presence in search without requiring any structural changes to what has already been built.
