What this is

The five channels

Not yet, in progress, live

Running the list

The university drawer

Working a channel

The three list channels

Tasks

Moving between the two

What this deliberately does not do

Example one: turning on the advisor listserv

Example two: adding your first student organization

Example three: getting permission, then activating a professor

What good looks like

A practical guide to what was built, why it works this way, and how to use it to run ST3 through ST7.

WHAT THIS IS

Until now, university activation has lived across meeting notes, inboxes, and memory: which advisor agreed to share the flyer, which student organization distributed it, when a job posting was last checked, and whether professor outreach had been approved. That can work with a few universities. It does not scale to dozens.

This workspace turns that work into a clear operating record. Two tabs sit in the MedJobs In Basket: **Universities** shows each campus and the status of its five activation channels; **Tasks** holds the follow-up work generated by those channels.

The design principle is simple: **record what happened, and let the system determine what it means**. There is no manual status dropdown. You complete real steps, and the status updates automatically.

THE FIVE CHANNELS

The five channels are unchanged from the operating model. What is new is that each now has a clear definition of what makes it live.

Channel	Live when
ST3 University job board	The posting is submitted, approved, and confirmed visible to students.
ST4 Advisor listserv	The advisor has agreed to send the flyer to the listserv and distribution is confirmed.
ST5 Student organizations	At least one student organization is activated.
ST6 Campus events	At least one event or webinar is activated.
ST7 Professors / class outreach	Approval is obtained and at least one professor has agreed to distribute or host.

ST3 and ST4 are single university-level workflows. ST5, ST6, and ST7 contain individual records - organizations, events, and professors - each with its own contacts, history, and next check.

NOT YET, IN PROGRESS, LIVE

Every channel and individual record follows the same status logic, and the user does not select the status manually.

Not yet is the default. **In progress** begins automatically when the first required step is completed. **Live** begins automatically when the required Live Win is complete. At that point, the system records the activation date, shows a brief success acknowledgement, and creates the next follow-up task.

Not available here is the one status the user chooses. Use it only when a channel genuinely cannot be activated at that university, and record why. A known limitation is useful information; an unexplained blank is not.

Individual records in ST5-ST7 can also be declined. A declined organization, event, or professor no longer appears as unfinished work.

Activation is recorded once and preserved. If a channel later becomes inactive, its original activation date remains part of the record.

RUNNING THE LIST

Open **Universities**. Each campus appears as one row, with ST3 through ST7 shown in the same order. A red dot beside the university means something is due or overdue. Universities with red dots sort to the top.

1 · UNIVERSITIES

UNIVERSITY	JOB BOARD	LISTSERV	STUDENT ORGS	EVENTS	PROFESSORS
● Ohio State	● Live	● Live	● 2 of 4	● 1 of 2	● 1 of 3
● Michigan State	● Live	● In progress	● Not yet	● Not yet	● Not yet
University of Florida	● Live	● Live	● 3 of 3	● 2 of 2	● Not available
UT Austin	● Live	● Live	● 4 of 4	● 1 of 1	● 2 of 2

Exhibit 1. The Universities tab. Work from the top down; red dots show where attention is needed.

Click a university row to open its detail drawer.

THE UNIVERSITY DRAWER

The drawer is intentionally compact. It shows the university name, a simple progress summary, and the five channel cards. Each card shows its status, progress, and next-check date.

2 · UNIVERSITY DRAWER

Ohio State
2 of 5 live · 3 in progress

● ST3 University job board	Activated 14 Sept 15 Dec ▶
● ST4 Advisor listserv	Activated 21 Sept ● 5 Oct ▶
● ST5 Student organizations	2 of 4 live 12 Oct ▶
● ST6 Campus events	1 of 2 live 8 Jan ▶

Exhibit 2. One university, its five channels, and the information needed to run them.

WORKING A CHANNEL

Each channel follows the same basic structure so the workflow feels familiar from one channel to the next.

3 · ST4 EXPANDED

● ST4 Advisor listserv Activated 21 Sept ● 5 Oct ▾

LIVE WIN
The advisor has agreed to send the flyer to their listserv.
All required.

- ☒ Advisor sent the current flyer 19 Sept
- ☒ Advisor agreed to distribute it 21 Sept
- ☒ Distribution confirmed 21 Sept

SUGGESTED EMAIL Copy

Subject: A paid option for your pre-health students

Hi Dana Whitfield,

Attached is the one-page flyer I mentioned. It explains how students can pick up paid caregiving shifts that work around a class schedule.

Would you be willing to send it to your pre-health listserv? Happy to change anything before you do.

Thanks,
[Your name]

CALL OR MEETING SCRIPT Copy

I sent over a one-page flyer about paid caregiving shifts for students. It is written so you can forward it as is.

Would you be able to send it to your pre-health list this month? I can adjust anything first if that helps.

Mark not available here

➤ HISTORY (1) Add note

Exhibit 3. ST4 expanded: Live Win, contacts, communication assets, and history.

Live Win is the checklist of events that must actually occur. Check a step only when it has happened. The system records the date automatically.

Contacts default to the university advisor. If another person owns the work - for example, a career-services contact for the job board or an event coordinator - add that person instead.

Suggested email and call scripts appear when the workflow requires an ask. They are deliberately short, clear, and editable. Use Copy to take the language into your normal communication tool; the workspace does not send email.

History stays collapsed until needed. Add notes when context will matter later.

Mark not available here appears at the bottom and requires a reason.

THE THREE LIST CHANNELS

Student organizations (ST5). Add organizations one at a time. Each organization is its own record, with up to two contacts, its own Live Win, history, and next check. An organization becomes Live when its leadership agrees to at least one meaningful distribution method: sharing the flyer through a member channel, emailing it to members, or arranging a presentation.

The screenshot shows a web interface for managing student organizations. At the top, it says "4 · ST5 EXPANDED". Below this is a header for "ST5 Student organizations" with a status "2 of 4 live" and a date "12 Oct". A message states "At least one organization is activated." The main content area lists three organizations: "AMSA Chapter" (green dot), "Pre-Nursing Society" (green dot), and "Public Health Club" (orange dot). The "AMSA Chapter" entry is expanded, showing details: "LIVE WIN" with the text "Leadership agreed to any one of these. Any one is enough." and three checkboxes: "Share the flyer in a group chat or membership channel" (checked), "Email the opportunity to members", and "Host or arrange an Olera presentation". Below this is the "CONTACTS" section, listing "Priya Raman · President · praman@osu.edu" and "Next check 12 Oct". There is also a "Mark declined" link and a "HISTORY (1)" section with an "Add note" link. The "Pre-Nursing Society" entry shows "Jordan Blake 8 Nov" and the "Public Health Club" entry shows "Sam Ortiz".

Exhibit 4. ST5. Each organization is managed as its own record.

Once an organization is Live, the system creates a monthly reconnect so distribution does not depend on memory.

Campus events (ST6). Add both Olera-hosted webinars and university events such as career fairs. An event becomes Live when five things are true: a leader is identified, host approval is obtained, a date is scheduled, a presenter is assigned, and collateral is ready.

ST6 also creates a semester review so the team regularly checks for new webinars, career fairs, conferences, and other student-facing opportunities.

PROFESSORS AND CLASS OUTREACH (ST7)

5 - ST7 EXPANDED

ST7 Professors / class outreach 1 of 3 live

We do not prospect or email professors until this is cleared.

LIVE WIN
Approval to use the directory and contact professors directly.
All required.

- ☒ Approval pathway identified 12 Sept
- ☒ Approval obtained 10 Oct

Person Dana Whitfield
Mechanism Advisor confirms with the department chair

Dr. Elena Marsh Dr. Elena Marsh 8 Jan

LIVE WIN
The professor agreed to any one of these.
Any one is enough.

- ☒ Outreach sent progress only 12 Oct
- ☒ Distribute the opportunity to students 18 Oct
- ☐ Allow a brief class visit or presentation

CONTACTS
Dr. Elena Marsh · emarsh@osu.edu

SUGGESTED EMAIL Copy

Subject: A brief note for your students

Dear Dr. Elena Marsh,

Dana Whitfield suggested I write.

We work with local care providers who hire students for paid caregiving shifts that fit around coursework. It is clinical-adjacent experience, and it pays.

Would you be willing to pass the attached flier to your students? If it

Exhibit 5. ST7. The approval workflow comes first; professor outreach opens only after approval.

ST7 is intentionally gated. The team should not prospect or email professors until the university has confirmed that this outreach is appropriate.

First, record who can provide approval and how approval is obtained. Use notes and history while that process is underway. Once approval is recorded, the professor list opens.

A professor becomes Live when they agree either to distribute the opportunity to students or to allow a brief class presentation. If a class presentation is approved, record whether it is virtual or in person, the date and time, and the assigned presenter.

Each Live professor returns to the workflow on a seasonal cadence for re-engagement.

TASKS

Recurring tasks are created by the workflow. The user does not need to choose a task type from a menu. The system creates the appropriate follow-up when a meaningful event occurs.

TASKS

Exhibit 6. The Tasks tab, grouped by urgency. Each task identifies its university and channel.

Task	Created when	Cadence
Confirm posting still live	ST3 goes Live	Monthly
Confirm advisor agreed to distribute	Flyer is sent to advisor	Once, after 7 days
Remind advisor to send again	ST4 goes Live	Monthly
Reconnect to maintain distribution	Organization goes Live	Monthly per organization
Semester review of event opportunities	ST6 begins	Each semester
Event day	Event date is scheduled	Once
Re-engage professor	Professor goes Live	Seasonally per professor

OPENING A TASK

Remind to send copy to listserv again

Ohio State - ST4 →
Due 5 Oct

WHAT THIS IS

Send the advisor fresh copy for this month's listserv send.

WHY

The advisor forwards what we write. If we do not write it, nothing goes out.

STEPS

1. Write this month's copy: subject line, three sentences, and the link.

2. Email it ready to forward, unedited, under their own name.

3. Confirm a send date before closing this task.

SUGGESTED EMAIL

Copy

Subject: This month's copy for the pre-health list

Hi there,

Here is this month's note, ready to send as is.

[three sentences and the link]

Is there a day this week that works?

Thanks,

[your name]

CALL OR MEETING SCRIPT

Copy

I have this month's copy ready for the list. It is short and written so you can send it as is. Is there a day this week that works for you?

DONE WHEN

The advisor has this month's copy and a send date is agreed.

Mark done

Skip this cycle

Repeats every 1 month. The next one is created when this is closed.

Exhibit 7. An expanded task shows what to do, why it matters, the steps, useful copy, and what counts as complete.

Mark done closes a routine check and schedules the next occurrence at the correct interval. If the task cannot be completed this cycle, **Skip this cycle** moves it forward without recording work that did not happen.

Custom tasks cover work that does not fit the five standard channels. Give the task a name and due date, then add your own checkbox items to define what needs to be completed.

CUSTOM TASKS

The image shows a 'New task' form with the following fields and options:

- TASK**: A text input field.
- DUE**: A date picker showing '09/15/2026'.
- UNIVERSITY**: A dropdown menu.
- CHANNEL (OPTIONAL)**: A dropdown menu with 'None' selected.
- DETAILS**: A text area.
- CHECKLIST**: A section with a text input field containing 'What needs to be done' and a '+ Add item' link below it.
- Buttons**: 'Cancel' and 'Create' buttons at the bottom right.

Exhibit 8. A custom task with user-defined checklist items.

MOVING BETWEEN UNIVERSITIES AND TASKS

Navigation works in both directions. Clicking a Next Check date in a university record opens the related task. Every task links back to its university and channel. A red dot leads to the specific item that needs attention. You can begin from either tab without losing context.

WHAT THIS DELIBERATELY DOES NOT DO

The MVP does not send email or assign work to multiple users. It does not claim to measure which university channel produced a student, because that attribution is not yet reliable. It also does not automatically decide that a channel has gone stale.

These are deliberate scope choices, not missing features. Add complexity only when the current workflow creates a clear operational need.

THREE WORKED EXAMPLES

The following examples show the most common workflows from start to finish.

EXAMPLE ONE: TURNING ON THE ADVISOR LISTSERV

This example shows both activation and the automatic follow-up behavior.

STEP 1. OPEN THE CHANNEL

The advisor has agreed in principle to share the opportunity with the pre-health list. Open the university, then open ST4.

ST4 • NOTHING DONE YET

ST4 Advisor listserv Not yet activated ▼

LIVE WIN
The advisor has agreed to send the flyer to their listserv.
All required.

- ☐ Advisor sent the current flyer
- ☐ Advisor agreed to distribute it
- ☐ Distribution confirmed

SUGGESTED EMAIL Copy

Subject: A paid option for your pre-health students

Hi Dana Whitfield,

Attached is the one-page flyer I mentioned. It explains how students can pick up paid caregiving shifts that work around a class schedule.

Would you be willing to send it to your pre-health listserv? Happy to change anything before you do.

Thanks,
[Name redacted]

CALL OR MEETING SCRIPT Copy

I sent over a one-page flyer about paid caregiving shifts for students. It is written so you can forward it as is.

Would you be able to send it to your pre-health list this month? I can adjust anything first if that helps.

Exhibit 9. Nothing has been completed yet, so the channel remains Not yet.

Use the suggested email as a starting point, edit it as needed, and send the current flyer.

STEP 2. RECORD THAT YOU SENT IT

Check **Advisor sent the current flyer**. The system records the date automatically.

ST4 · FIRST STEP TICKED

ST4
Advisor listserv
Not yet activated 26 Sept ▾

LIVE WIN
The advisor has agreed to send the flyer to their listserv.
All required.

☒ Advisor sent the current flyer 19 Sept

☐ Advisor agreed to distribute it

☐ Distribution confirmed

Eugene Samal

CALL OR MEETING SCRIPT Copy

I sent over a one-page flyer about paid caregiving shifts for students. It is written so you can forward it as is.

Would you be able to send it to your pre-health list this month? I can adjust anything first if that helps.

Exhibit 10. The first completed step moves the channel to *In progress* and creates a seven-day follow-up.

Two things happen automatically: the channel moves to **In progress**, and a task is created for seven days later to confirm whether the advisor agreed to distribute the flyer.

The system now owns the reminder. The user does not need to remember to follow up.

STEP 3. COMPLETE THE FOLLOW-UP

Seven days later, the follow-up appears in the Tasks tab.

Confirm advisor agreed to distribute the flyer

Ohio State · ST4 →

Due 26 Sept

WHAT THIS IS

You sent the advisor the flyer. Find out whether they have agreed to send it to the listserv.

WHY

The send only happens because we ask. A flyer sitting unanswered in an inbox is not a channel.

STEPS

1. Check for a reply.

2. If there is none, follow up directly. A short note or a call is usually enough.

3. Answer below once you know.

SUGGESTED EMAIL

Copy

Subject: Checking on the flyer

Hi there,

Just checking on the flyer I sent last week. Would you be able to send it to your pre-health list?

Happy to change anything first.

Thanks,

[your name]

Exhibit 11. This task asks for an outcome, so it offers a direct response rather than a generic Mark done button.

If the advisor agreed, choose **Yes, they agreed**. That updates the same underlying fact in the university record. The task and the channel checklist cannot disagree because they represent one event.

If the advisor has not responded, choose **Not yet, ask again**. The task moves out one week and the Live Win remains incomplete.

STEP 4. CONFIRM DISTRIBUTION

Once the flyer has actually been distributed, check **Distribution confirmed**. With all required steps complete, ST4 becomes Live automatically.

Exhibit 12. All required steps are complete. The channel is Live and the next monthly check is already scheduled.

The system records the activation date, shows a brief success acknowledgement, and places the next check on the card. From that point forward, the monthly reminder keeps the listserv relationship active.

EXAMPLE TWO: ADDING YOUR FIRST STUDENT ORGANIZATION

STEP 1. OPEN ST5

Open the Student Organizations channel. If no organizations have been added, the empty state should make the next action obvious.

Exhibit 13. An empty ST5 channel with one clear action: Add organization.

STEP 2. ADD THE ORGANIZATION

Select **Add organization**, enter the organization or chapter name, and save it.

The screenshot displays a web interface for managing student organizations. At the top, a status bar indicates 'ST5 · ONE ADDED'. Below this, a header section for 'ST5 Student organizations' shows '0 of 1 live' organizations. A message states 'At least one organization is activated.' The main content area features a card for the 'AMSA Chapter' managed by 'Priya Raman'. Under the 'LIVE WIN' section, it notes 'Leadership agreed to any one of these. Any one is enough.' and lists three options: 'Share the flyer in a group chat or membership channel', 'Email the opportunity to members', and 'Host or arrange an Olera presentation', all of which are unchecked. The 'CONTACTS' section lists 'Priya Raman · President' and a 'Mark declined' link. A 'HISTORY (0)' section with an 'Add note' link is also present. At the bottom, a dashed box contains a '+ Add organization' button.

Exhibit 14. The organization has been added, but nothing has been agreed to yet.

Each organization keeps its own Live Win, up to two contacts, history, and next check.

STEP 3. RECORD WHAT THE ORGANIZATION AGREED TO

If the organization agrees to share the flyer through a group chat, email it to members, or host a presentation, check the applicable option. Any one meaningful distribution method is enough to activate that organization.

Exhibit 15. One meaningful distribution commitment is enough to make the organization Live and schedule its monthly reconnect.

The system does not require all distribution methods. A group-chat share, member email, or presentation can each create real student reach.

Adding more organizations later does not erase earlier activation. The channel preserves what has already been achieved while showing the status of the current organization queue.

EXAMPLE THREE: GETTING PERMISSION, THEN ACTIVATING A PROFESSOR

ST7 is the one channel where the system enforces a prerequisite before outreach can begin.

STEP 1. START WITH THE APPROVAL GATE

The screenshot shows a web interface for a task titled "ST7 Professors / class outreach". At the top left, it says "ST7 · LOCKED". At the top right, it says "None added" with a downward arrow. The main content area has a light blue background and contains the following text: "We do not prospect or email professors until this is cleared." followed by "LIVE WIN" in bold. Below that is "Approval to use the directory and contact professors directly." and "All required." in smaller text. There are two checkboxes: "Approval pathway identified" and "Approval obtained", both of which are unchecked. Below the checkboxes is a table with two rows: "Person" with the value "Dana Whitfield" and "Mechanism" with the value "Advisor confirms with the department chair". Below the table is a dashed box containing the text "Prospecting unlocks when approval is recorded." At the bottom left of the main area, it says "Mark not available here". At the very bottom, there is a section titled "HISTORY (0)" with a right arrow, and an "Add note" link on the right.

Exhibit 16. Professor outreach is locked until the university's approval pathway is recorded.

Do not prospect faculty until the university has confirmed that direct outreach is appropriate. Start with the advisor: ask who can approve use of the university directory and direct email outreach to professors.

STEP 2. RECORD THE PATHWAY AND APPROVAL

Check **Approval pathway identified** once you know who decides and how approval is obtained. Record the relevant contact and mechanism. Because approval may take several conversations, use History and Notes to document progress.

STEP 3. ADD PROFESSORS AFTER APPROVAL

The screenshot displays a workflow interface for 'ST7: Professors / class outreach'. It shows a 'LIVE WIN' status with a message: 'We do not prospect or email professors until this is cleared. LIVE WIN Approval to use the directory and contact professors directly. All required.' Below this, two tasks are marked as complete: 'Approval pathway identified' (12 Sept) and 'Approval obtained' (10 Oct). A table lists the person as 'Dana Whitfield' and the mechanism as 'Advisor confirms with the department chair'. The interface then shows a list of professors, with 'Dr. Elena Marsh' selected. For Dr. Elena Marsh, the status is 'LIVE WIN' with the message: 'The professor agreed to any one of these. Any one is enough.' Two tasks are marked as complete: 'Outreach sent progress only' (12 Oct) and 'Distribute the opportunity to students' (18 Oct). There is an unchecked checkbox for 'Allow a brief class visit or presentation'. Below this, a 'CONTACTS' section lists 'Dr. Elena Marsh' with email 'emarsh@osu.edu'. A 'SUGGESTED EMAIL' section shows a draft email with the subject 'A brief note for your students' and the body: 'Dear Dr. Elena Marsh, Dana Whitfield suggested I write. We work with local care providers who hire students for paid caregiving shifts that fit around coursework. It is clinical-adjacent experience, and it pays. Would you be willing to pass the attached flyer to your students? If it is'.

Exhibit 17. Once approval is recorded, the professor list opens and outreach can begin.

Add professors one at a time with their department, course where relevant, and contact information. The suggested outreach email should reference the university contact or process that authorized the outreach when appropriate.

STEP 4. SEND OUTREACH AND RECORD THE OUTCOME

Check **Outreach sent** when the professor is contacted. That moves the professor to In progress; contact alone is not activation.

A professor becomes Live when they agree either to **distribute the opportunity to students** or **allow a brief class presentation**. If a presentation is approved, record whether it is virtual or in person, the date and time, and the assigned presenter.

Each Live professor returns to the workflow on a seasonal cadence for re-engagement.

WHAT GOOD LOOKS LIKE

A well-managed university has an honest record of which channels are active, which are still being worked, which are unavailable, and when each active relationship needs attention next.

The goal is not necessarily five Live channels. A university with a nonfunctional job board or no approved faculty access - clearly documented - is in better operational shape than one with five unexplained blanks.

University activation is not a stage that simply closes. It creates standing relationships that require maintenance. Job postings expire. Student leaders graduate. Event calendars change. Listserv distribution happens only when someone asks. Professor relationships need to be renewed.

Each channel therefore has two motions: **activate it once, then keep it active**. The second motion is what determines whether a university continues producing student candidates over time.

The purpose of this workspace is to make that maintenance ordinary operating work rather than something the team has to remember.

MVP OPERATING PRINCIPLE

Complete concrete work. Let the system determine status. Follow the next check. Keep the university active.
